Intel X4500

DRIVERS FOR INTEL X4500
(Q45,Q43,G45,G43,G41,B43)

My latest Intel Modded Drivers (Supports for Windows 7,8,8.1,10.) version 10.0.

What's new:

I increased restriction in the use of memory to 2.00 GB.
 I turned on the MediaScaling and DynamicScaling that very well affect the performance of the graphics card. Also turned pipe optimization.
 I created 2 driver version: full and lite. If you have 1 GB or more RAM, you need to install the lite version. If you have 3 GB or more RAM, you need to install the full version. What is the difference? Lite version uses less memory at 2 times (64 MB or more). Full version uses two times more RAM (128-192 and more).

For X64[64Bit] OS:

Lite (If you have 1 gb and more of RAM) **>Download<**

Full (If you have 3 gb and more of RAM) **>Download<**

For X86[32Bit] OS:

>Download<

version 10.1
(SOON)
FOR ONLINE GAMING

 If you have Windows 10 or 8 or 8.1 go on cmd and type bcdedit -set loadoptions DISABLE_INTEGRITY_CHECKS Press ENTER
 bcdedit -set TESTSIGNING ON
